

LUND UNIVERSITY

Regression Testing in Product Lines - Theory and Practice

Professor Per Runeson

LUND UNIVERSITY

Product Line Principles

- Reuse of common assets, primarily through configuration
- Product line development saves development effort
- Product line testing expensive – if brute force is used

LUND UNIVERSITY

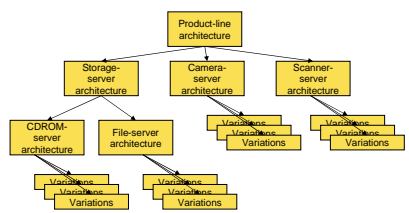

Key term: Variability

In theory:

- Well defined
- Well controlled

In practice

- Identified in hindsight
- Defined at various levels

[Bosch00]

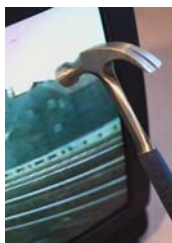

LUND UNIVERSITY

Testing Purposes

- Reveal faults
- Build trust

“ The Testing Paradox ”

LUND UNIVERSITY

Regression testing

“Retesting...to ensure that the new version of the software has retained the capability of the old version”

[Burnstein02]

Within project/product regression
Across project/product regression

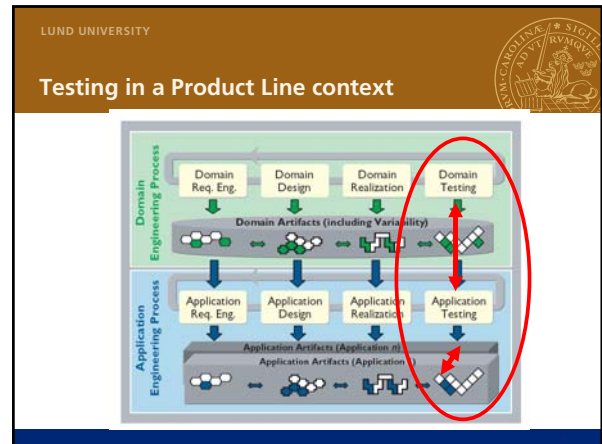

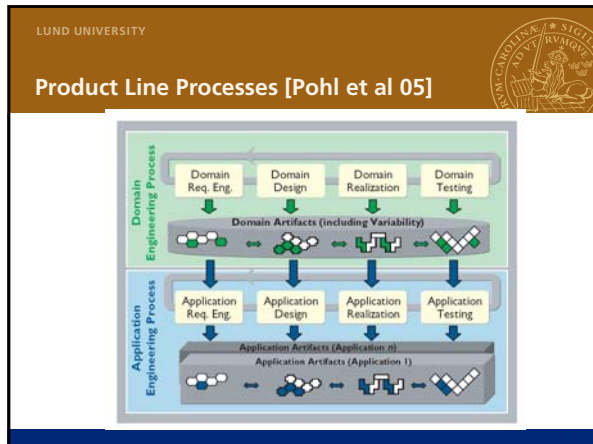

LUND UNIVERSITY

Regression test selection

| | Manual | Automated |
|----------------|----------------------------|----------------------|
| Small programs | Analysis based | Retest all, e.g. TDD |
| Large systems | Risk based Change based | Utopia |

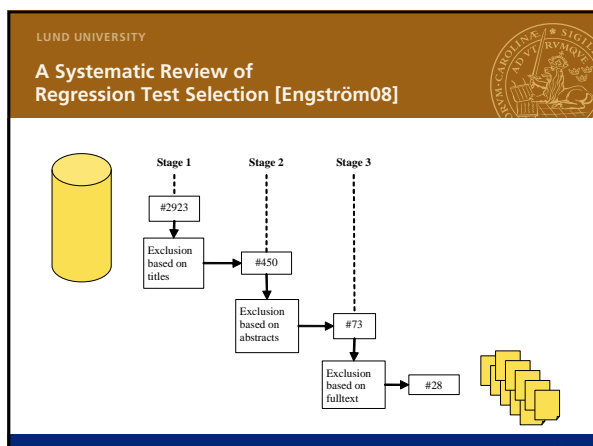

- LUND UNIVERSITY
- ### Test strategies
- Brute Force Strategy – test everything at domain level
 - Pure Application Strategy – test everything at application level
 - Sample Application Strategy – test a sample at domain level, and the full application testing
 - Commonality and Reuse Strategy – test common parts at domain level, and variability at application level

LUND UNIVERSITY

Evaluation [Pohl05]

| | Time to create | Absent variants | Early validation | Learning effort | Overhead |
|-------|----------------|-----------------|------------------|-----------------|----------|
| (BFS) | - | - | + | 0 | - |
| (PAS) | 0 | + | - | + | - |
| SAS | 0 | + | + | + | - |
| CRS | + | + | 0 | - | + |
| SAS+ | + | + | + | 0 | 0 |
| CRS | | | | | |

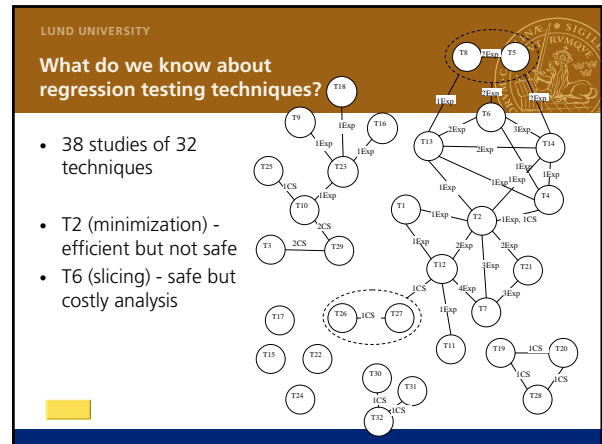

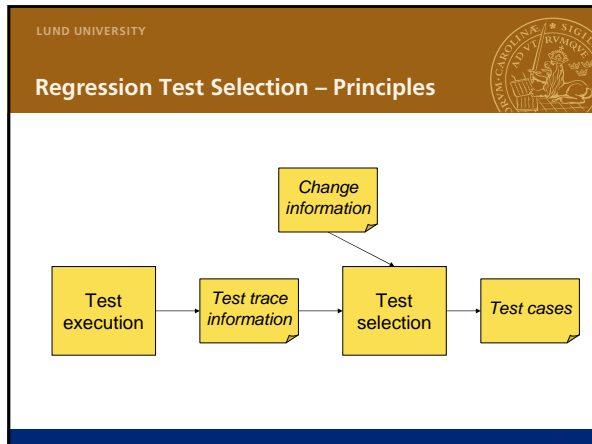

LUND UNIVERSITY

Studies overview

Table 6 Studies of different type and size

| Type of studies | Size of subjects under study | Number of studies | % |
|-----------------|------------------------------|-------------------|------------|
| Experiment | Large | 1 | 3 |
| Experiment | Medium | 7 | 18 |
| Experiment | Small | 15 | 39 |
| Case study | Large | 4 | 11 |
| Case study | Medium | 5 | 13 |
| Case study | Small | 4 | 11 |
| Case study | Not reported | 2 | 5 |
| Total | | 38 | 100 |

Annotations: 'Good control' is associated with the first three rows (Experiments), and 'Good relevance' is associated with the last three rows (Case studies).

- LUND UNIVERSITY
- ### Future research
- Scale up: 100 LOC → 10 KLOC → 0,7 MLOC → ?? MLOC
 - Case study: risk based regression testing – Effectiveness?
 - Survey: regression testing practices – Volunteers?

- LUND UNIVERSITY
- ### Summary
- Potential for saving on product-line regression testing
 - Trade-off between domain and application testing
 - Investigations on technical level exist
 - Strategic level research needed
